

PHOSTROL FUNGICIDE

PHOSTROL is an extremely systemic and highly unique phosphite fungicide that has both a direct and indirect effect on harmful turfgrass diseases.

PHOSTROL is an effective, convenient and flexible tool for the management of Anthracnose and Pythium blight.

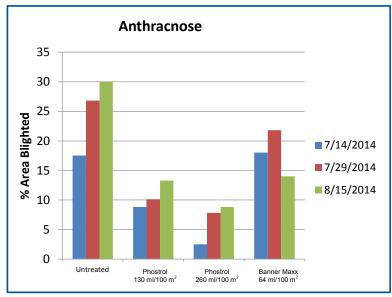

HIGHLY SYSTEMIC

PHOSTROL® is translocated through the xylem and phloem for complete plant protection.

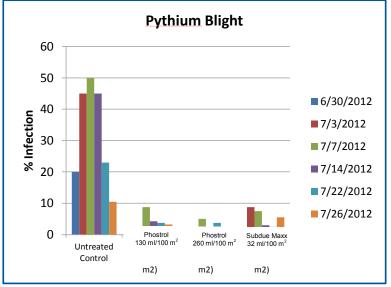

EFFECTIVE PROTECTION

Vargas & Dykema - Michigan State University, 2012 14 Day interval – start June 19th Inoculated with Pythim aphanidermatum

TECHNICAL INFORMATION Active Ingredients: Mono and dibasic sodium, potassium and ammonium phosphites Formulation: Liquid Packaging & Coverage: Case of 2 x 10 L containers 1.5 to 0.75 ha (3.8 to 1.9 ac) 1000 Litre tote 77 to 38.5 ha (190 to 95 ac) Two Modes of Action: Inhibition of oxidative phosphorylation SAR – stimulates the plant's natural defence response FRAC Group: 33

Vargas & Dykema - Michigan State University, 2014 14 day interval – start June 23 Inoculated with *Colletotrichum cereale*

DIRECTIONS FOR USE ON TURFGRASS			
Crop	Pest	Rate	Comments
Turfgrass	Suppression of: Pythium blight Anthracnose	130-260 ml / 100 m ²	Begin preventative foliar applications when conditions favouring disease development exist and continue on a 14 day interval if needed. Use 4 – 20 Litres of water / 100 m ²
Always read and follow label directions.
